METHOD AND APPARATUS FOR SETTING UP A CALL OVER A PACKET-BASED TRANSPORT NETWORK

Abstract of the Disclosure

5

10

A method comprises the steps of directing a call intended for a mobile (531) to a virtual tandem switch (501). The virtual tandem switch (501), which may include multiple converters (505 and 507) queries a home location register to obtain call information for the mobile (531). The call to the mobile (531) is set up over a packet-based transport network (523).
